

Temperature Sensing Module

Introduction

The E-Plex 303TM Temperature Module is capable of sensing temperatures from -20 to +70 degrees Celsius and can output that data to the E-Plex bus. Once the data is on the E-Plex bus, it can be relayed to a graphical or analog display.

It features an inbuilt digital temperature sensor and the ability to connect an optional external digital temperature sensor. If the unit detects an external sensor in the first socket, it will report the external sensor instead of the internal one.

The unit does not require any calibration.

Key Features

- Senses temperatures from -20 to +70 degrees Celsius.
- LEN value 3.
